GOING. GOING. GONE!
Why use metal? Advanced biomaterials tailor-made to biodegrade.

- Clinically tested
- Significantly improved osteotomy healing scores vs. metal cages
- Engineered to provide adequate mechanical properties for safe bone healing
- Bioabsorption profile mimics that of natural bone healing
- Proprietary compounding of bioabsorbable materials & osteo-conductive materials provides faster bone growth
- Cost comparable to titanium
- May be used in infected environments
- Radiolucent postoperative imaging
- Available in 6mm, 9mm, & 12mm sizes
- Interchangeable wings
